2. Partial Year

1. Annualized return. 2. 2014 Return begins at Fund inception. 3. Portfolio Metrics are sourced from CapitalIQ. 4. Portfolio Statistics are calculated on Series M since inception. 5. Benchmark: 40% S&P/TSX Composite Total Return Index / 30% S&P 500 Total Return Index CAD / 30% Morningstar Developed Markets ex-North America Target Market Exposure NR CAD (100% Long). Effective January 1, 2021, the MSCI EAFE Net CAD Total Return Index portion of the fund's benchmark was changed to its Morningstar equivalent. The Morningstar Developed Markets exAmerica NR CAD is substantially similar to the MSCI index it replaces. The benchmark represents the fund's investment universe, target weightings and net long position. Effective October 4, 2016, the fund's investment objective was changed to increase the fund's exposure to global equity markets. Performance prior to this date would have been different had the current objective been in effect. The Fund's Portfolio Manager also has the ability to invest a portion of the assets in cash and cash equivalents and/or high yield debt on a temporary basis when deemed advisable based on market conditions. 6. Risk level is determined using the Fund's ten-year standard deviation. If a Fund does not have ten years of performance history, the risk level is calculated using the Fund's actual return history and the return history of its benchmark (which is expected to reasonably approximate the Fund's standard deviation) for the remainder of the ten year period.
