Private Wealth

Key Benefits

Provides a **steady income stream*** through fixed income investing.

Aims to preserve capital while **mitigating risk exposure** from both an interest rate risk and credit risk perspective.

Diversified portfolio of bonds by sector, issuer and maturity.

May corporate new issuance added total new supply of \$9.4 billion. This brings total supply for the first five months of 2022 to \$61.1 billion or 11% higher than last year. The Bank of Canada did not meet during May, but on June 1, 2022 the Bank did meet and raised the overnight rate by 0.50% to 1.50%. Markets are currently pricing in approximately six, 0.25% increases in the overnight rate between now and the end of 2022. The yield curve was mixed in May as short-term rates (under 2 years) moved higher 5bps to 14 bps, mid-term rates (3-5 years) moved lower 1 bp to 3 bps, and longer rates moved higher 3 bps to 6 bps. Corporate spreads generally widened 4 to 10 bps (with 5 year AA widening the most), although A and AA rated 30 year spreads tightened 1-2 bps. The bond universe had another challenging month, returning -7bps, the corporate bond index returned -15bps, while the short bond index returned +24bps. Canadian High Yield returned -163bps. The M Series of the Fund produced a small positive return in May. Shorts on Government of Canada bonds helped, while long positions in NuVista Energy and Bank of Nova Scotia dragged on performance.

2. Partial Year

1. Annualized return. 2. 2016 Return begins at Fund inception. 3. Portfolio Metrics are sourced from Bloomberg. 4. Portfolio Statistics are calculated on Series M since inception. 5. Benchmark: 50% FTSE Canada Universe Bond Index/50% FTSE Canada IG Corporate 1-5Y Index (100% Long). The benchmark represents the primary investment universe of the Fund, but may have a longer duration relative to the Fund's bond allocation which has a short duration bias. The Fund may also invest, to a lesser extent, in money market bonds or equivalents, high yield bonds, convertible bonds and preferred shares which are not represented in the benchmark. 6. Risk level is determined using the Fund's ten-year standard deviation. If a Fund does not have ten years of performance history, the risk level is calculated using the Fund's actual return history and the return history of its benchmark (which is expected to reasonably approximate the Fund's standard deviation) for the remainder of the ten year period.
